

User Guide for TosBlue-X

TosBlue-X can only connect with one receiving unit – for example one BHX headset from Telme2.

Once you have installed the TosBlue-X unit – you are ready to use it for the first time.

Do this:

- Set your Bluetooth receiver in pairing mode.
- Then turn your TV ON. Do it in this sequence.
The two units should now pair.

NOTE:

Connecting the two units the next time – and the following times - do this:

- Turn ON your Bluetooth receiver – Not set it in pairing mode.
- Turn ON your TV with the TosBlue unit. Do it in this sequence.
- The two units should now interconnect.

Example: Pairing the BHX headset with the TosBlue-X for the first time

- Turn ON your TV with the TosBlue-X unit
- Press the ON/OFF/pairing button for several seconds on the BHX headset, until the LED flashes red and blue.
- Release the button and the two units will pair.

When paired, the TosBlue-X LED will be emitting a blue light fading slowly in and out - indicating the unit is paired and ready to transmit sound.

The LED in the headset will be flashing blue now and then – indicating the unit is paired and is receiving sound from TosBlue-X.

Example: Reconnecting the a BHX headset the next time – and following times

- The next time you want to reconnect the BHX headset with the TosBlue-X unit, you simply turn the BHX headset ON. You do this by pushing the button for just a couple of seconds until only the blue light flashes - and the two units will reconnect automatically. NOTE: Do not set the headset in pairing mode this time.
