

User Guide for TosBlue-Y

TosBlue-Y is designed for transmitting sound to two headsets at the same time. The unit is equipped with two independent transmitting sections. Both enhanced with the best aptx technology. The unit may also be used with only one headset. NOTE: To obtain no delay, the receiving unit - headset - must have aptx incorporated as well. A good choice is our BHX headset.

Features:

- Easy to pair
- Improved sound
- No sound delay

Pairing for the first time:

- Set the first headset in pairing mode.
- Turn TV ON. Power is applied. Section 1 goes into pairing mode.
 - o *Blue LED is flashing quickly*
 - o *When first headset is paired, blue LED is fading slowly in and out.*
- Set the second headset in pairing mode
 - o Red LED is flashing quickly
 - o When paired with second headset, red LED is fading slowly in and out
 - o With two headsets connected – red and blue LED's are fading slowly in and out.

Connecting same headsets the next time – and thereafter:

After power is applied to your TV and the TosBlue-Y unit, just turn ON the first headset. When connected – turn ON the second headset. Both headsets are now connected.

NOTE: When you use a new headset – you must do the pairing process!
